

Claims:

1. An interface (LEM) operative to provide a CAMEL based service to a subscriber terminal in a WIN network by causing the CAMEL based service to appear
5 to the WIN network as an Application in accordance with the Open Service Access (OSA) standard.

2. An interface (LEM) according to claim 1, comprising an Open Service Access (OSA) interface to an Open Service Access gateway (OSA GW) of the WIN network, and operative to convert received Open Service Access (OSA) messages to
10 CAMEL Application Protocol Messages.

3. An interface (LEM) according to claim 1, in which CAMEL- based subscriber information is mapped to the WIN network, the interface acting as a WIN home location register (HLR).

4. An interface (LEM) according to claim 3, in which the interface is
15 operative to pass the subscriber information by relating an Open Service Access (OSA) getNotification operation to a WIN registration notification (REGNOT) operation.

5. An interface (LEM) according to claim 1, in which upon a service request being made in respect of the subscriber terminal, a received Open Service Access (OSA) reportNotification is converted to a CAMEL Application Protocol Initial
20 Detection Point.

6. A mobile telecommunications system comprising a WIN network, an interface according to claim 1 and the subscriber terminal, the subscriber terminal being a CAMEL subscriber terminal which has roamed into the WIN network.

7. A method of providing a CAMEL based service to a subscriber
25 terminal in a WIN network comprising providing an interface (LEM) causing the CAMEL based service to appear to the WIN network as an Application in accordance with the Open Service Access (OSA) standard.

8. An interface (LEM) operative to provide a WIN based service to a subscriber terminal in a CAMEL network by causing the WIN based service to appear
30 to the CAMEL network as a CAMEL application (CAP).

9. An interface (LEM) according to claim 7, comprising a WIN interface to a WIN platform of the WIN network, and operative to translate CAMEL Application Protocol messages to the WIN platform.

10. A method of providing a WIN based service to a subscriber terminal
5 in a CAMEL network comprising providing an interface (LEM) causing the WIN based service to appear to the CAMEL network as a CAMEL application (CAP).
